Tabasco Water Heaters

TO those engaged in business as engineers, architects, or contractors there comes frequently the responsibility of not only specifying certain general types of equipment for hot water supply, but of recommending some particular make of equipment best suited for this work.

The reliability of the product and the concern who builds it, that it be properly designed, constructed of the right material in the most approved manner for the purpose for which it is intended, are most important.

Such a heater must be simple to operate, require very little attention and be safe for the high water pressures which are carried now in most cities. To accomplish this and insure against cracking or breaking, the heater should be built of steel. Clean-out plugs or handholes should be provided for cleaning the inside of the heater and the heater should serve its purpose well and deliver plenty of hot water and at the same time be economical of fuel, having a long life with practically no repair cost.

Kewanee-Tabasco Heaters fulfill the above requirements and are most dependable. Kewanee-Tabasco Heaters make good, reflecting credit upon you who specify and recommend them. Kewanee-Tabasco Heaters satisfy customers.

Kewanee-Tabasco Water Heaters are made in sizes to heat from 130 to 700 gallons of water per hour.

1098-3121 TCT

Tabasco Water Heater With Tank

ALL steel surface burning or magazine feed. Standard Tabasco Heaters constructed for maximum working pressure of 60 pounds. All Tabasco Heaters are supplied with brass clean-out plugs.

The Tabasco as a Hot Water Heating Boiler

THE ever-increasing demand for a heating boiler constructed of steel for the bungalow, cottage, garage, greenhouse and other buildings requiring small heating plants is being met with the Tabasco Hot Water Boiler.

The same advantages to which attention is called on page 5, and which have made the Tabasco most dependable and satisfactory over a long period of years as a water heater, apply as well to the Tabasco as a Hot Water Heating Boiler.

The ratings, as published on page 12, are in keeping with the long-established policy of the Kewanee Boiler Company. These boilers will heat all of the radiation shown by their capacity.

Tabasco Hot Water Boilers and Kewanee Radiation can go forward in one complete shipment from the plant at Kewanee, Illinois, where both are made.

All Tabasco Water Heaters are equipped with the Tabasco improved rocking grate—a sectional clinker-cutting, dumping grate.

Heaters No. 21 and above have four 2-inch brass clean-out plugs.

Maximum working pressure, 60 pounds.

Every Tabasco boiler is honestly rated and will take care of its rated capacity.

Kewanee Water Heating Garbage Burners

FOR the larger buildings where garbage accumulates, such as apartments, hospitals, sanitariums, hotels, restaurants, club houses, etc., the most practical water heating equipment is the Kewanee Garbage Burner.

It is strongly constructed of steel, with cast-iron doors.

The operation is very simple. A small fire is started on the lower or coal grates, the garbage being thrown into the upper chamber in quantities to completely fill it if necessary. It requires a short time to dry the garbage, reducing it to a combustible condition, when it burns completely without odor, leaving only a small amount of fine, odorless ash.

While this burning of the garbage is going on a distinct saving of fuel in heating water for domestic purposes is effected. In the work of heating water accomplished by the garbage burner, a saving of from 30 to 50 per cent in fuel is made over a regular tank heater of the same capacity, consequently making what was an expense an asset, by making fuel of garbage. It also eliminates all cost of removing garbage.

The By-Pass (a patented feature of all Kewanee Water Heating Garbage Burners) prevents the wet and damp garbage from smothering the fire when it is first started, as it provides a passage for the flames around the garbage, drying it to a point where it ignites and burns without odor.

Kewanee Water Heating Garbage Burners are built to withstand a working pressure of 125 pounds per square inch, thus enabling them to carry the water pressure of any city in the Union.

Kewanee Water Heating Garbage Burners will produce best results at minimum cost when the storage tank attached to them has a capacity 50 per cent greater than the hourly capacity of the burner printed in the tables of specifications.

KEWANEE Steel Tanks

IN nearly thirty years of steel tank building the Kewanee Boiler Company has reached the point where it manufactures more steel tanks for all purposes than any other concern.

We specialize in the manufacture of tanks for Water Storage, Oil Storage, Air Receivers, Receiving Tanks, Gravel Basins and Blow-off Receivers as well as the Standard Hot Water Pressure Tanks and Pneumatic Tanks.

This catalog is intended to show the sizes which we regularly make and the specifications according to those sizes. Complete specifications on all types of tanks we are called upon to make are out of the question but we will be glad to quote prices on steel tanks no matter what the size might be or the pressure under which they will be operated or for what purpose they are intended. They can be furnished in galvanized steel which would be made of heavy steel plates being thoroughly double or single riveted and then galvanized.

Kewanee Steel Tanks will serve you and your customer in the same satisfactory manner that Kewanee Steel Boilers are now serving you.

Standard Tanks

TESTED to 100 pounds hydrostatic pressure, and for use where water working-pressure does not exceed 65 pounds. Regularly made with openings so that they may be used horizontally or vertically. Manholes, handholes, and coils furnished only when specially ordered. We recommend that tanks containing coils be made with a manhole.

Manholes and flanges can be located where desired.

KEWANEE Pneumatic Tanks

KEWANEE pneumatic tanks are built for 75 poundswater working-pressure. The horizontal seam is lap joint, double riveted, all rivet holes reamed to full size. The openings in shell are reinforced and carefully threaded. Prices for larger tanks than shown below, on application. Prices shown below are for plain tanks of which we have complete stock on hand. Prices for galvanized tanks can be furnished on application.

Tappings for KEWANEE Vertical Pneumatic Tanks

SIZE	B	D	E	H	I	J	K
24 x 5	6	57½					
24 x 6	6	69½	4½	1	25¼	29½	15¾
30 x 6	6	69½	5½	1	25¼	29½	15¾
36 x 6	6	69½	6½	1	25¼	29½	15¾

We are prepared to furnish all sizes of tanks as shown on opposite page for vertical installation. Tanks over 6 feet are tapped for two gauge glasses.

Gravel Basins and Blow-Off Receivers

Price List

Diameter Inches	Height Inches	Thickness Shell Inches	Thickness of Heads Inches	Capacity Gallons	Weight Pounds	Price with Manhole and Two Flanges
20	24	$\frac{1}{4}$	5-16	34	360	\$100.00
24	24	$\frac{1}{4}$	5-16	47	400	110.00
30	24	$\frac{1}{4}$	5-16	73	500	120.00
30	30	$\frac{1}{4}$	5-16	90	550	130.00
36	30	$\frac{1}{4}$	5-16	130	680	140.00
36	36	$\frac{1}{4}$	5-16	160	740	152.00
36	48	$\frac{1}{4}$	5-16	210	850	164.00

Flanges of any size required and located to suit purchaser. If handhole is used instead of manhole, deduct \$22.00 from above list.

KEWANEE Air Receivers

WE use steel of 55,000 pounds tensile strength in the shell and heads of all Air Receivers. Shell seams are lap joints, double-riveted; circular seams, single-riveted. Heads are dished to a radius equal to the diameter of the shell, making an exceptionally strong receiver, which is tested to 165 pounds hydrostatic pressure, and insures its being safe and tight under 110 pounds working pressure. Receivers larger in diameter than 36 inches are regularly made with a manhole.

Tested to 165 pounds hydrostatic pressure. Air receivers 36 inches in diameter and larger are regularly constructed with a 10 x 16-inch manhole in the shell. Trimmings include 5-inch pressure gauge, pop safety valve, and blow-off cock.

Operating Instructions for **Kewanee** Water Heating Garbage Burner

Before Starting Fire—

Open all valves in water supply pipe.
Make sure that the valves between the tank and heater are open.
The smoke pipe should be the same size as the collar on the burner.
Make sure that the damper in the same is wide open.
If there is a check damper, be sure to close it.
See that everything is clear and free from obstructions.

To Start Fire—

Build fire on the lower grates.
When draft is too strong, control fire by small draft door in front of the ash-pit.
Regulate your water temperature in this way.

To Burn Garbage and Refuse—

See that your fire is burning clear.
Open the damper in the smoke pipe wide.
Close the fire door and lower draft door.
Throw garbage and refuse in upper chamber only.
Keep the by-pass free from refuse.
If you get an odor from the top of the stack, the fire is not burning clear and there is not draft enough.

To Maintain Fire—

Do not carry the fire above the bottom of the fire door.
Remove ashes from ash-pit every time you shake the fire; otherwise you will burn the grates.
Bank your fires at night.

Suggestions—

Drain liquids off the garbage.
Line your garbage cans with old newspapers.
Destroy these papers with the garbage.

To Clean Burner—

Remove brass plugs on sides of burner.
Remove all handhole plates.
Scrape all interior surfaces free from mud and sediment.
Flush out the entire heater with water.
Do this at least five times a year; more frequently if necessary.
